

## **WinWinD chose Escap technology for its wind power plants**

Teknoware Oy has received remarkable orders with its Escap technology. For example, WinWinD Oy has chosen LED technology for the interior lighting of its wind power plants. Part of these luminaires work as emergency luminaires. The system has been designed as modular and is connected with fast connectors.

Important criteria were 10 year's maintenance-freedom as well as environmental friendliness, which can be obtained by using the LED supercapacitor technology.
